If you are working with a group of users, you can set up Photoshop to restrict certain actions and settings, such as making available a limited number of color corrections or creating multiple layers. Enabling and disabling these actions can be beneficial for shared media work. If you don't use Photoshop on the larger scale, you can still edit a photo or create a photo-related logo using Photoshop CC. Other options, such as layers and filters, are explained in this chapter. The following sections explain the information you find on a typical Photoshop screen. (Note that you may see something different on your computer.) The following sections explain the options you may see in this screen: • Change the number of images on your hard drive. If you have lots of images and are running out of hard drive space, select the option that adds more storage space. By default, the hard drive is set to all available space. • Set the default settings for the programs you open with Photoshop. You can select from a list of programs to include in Photoshop's Windows Search folders. You can also select the programs to add to your Quick Access Toolbar. By default, Photoshop adds its own tools to the Quick Access Toolbar. You may not see all the programs listed by default. Most of the programs you add to the Quick Access Toolbar are the programs you use most often, so you may

(Don't worry, Adobe has more brushes included in Photoshop than anyone could ever use, but you can always use different brushes than what's included.) For instructions on how to create your own brushes, see the Cheat Sheet on creating brushes for more information. You can use Photoshop to easily paint or draw on a photo — again, the main target is texture and pattern creation. For this reason, other Photoshop features such as brushes, gradients, and selections can be used to create drawing tools. See the reference photo on the Cheat Sheet on creating brushes to see examples of how to use these tools.
