Languages AutoCAD supports three languages of communication with the program: Visual LISP Visual LISP is an interpreter for a programming language called AutoLISP. The AutoLISP programs created using Visual LISP can be executed in either a graphics mode or an application mode. Graphics mode: the AutoLISP program can be executed on the screen in the graphical user interface. Application mode: the AutoLISP program can be executed in a command line, using a text editor to write code and compile it. Visual LISP is based on Visual BASIC but it is a programming language in itself. Some features of Visual BASIC are not supported, most notably recursion. Visual LISP is in fact an AutoCAD extension, allowing AutoCAD to interface with third-party software written in Visual

LISP. Visual LISP has been the standard AutoCAD programming language since AutoCAD 2013, when it was replaced by Visual BASIC. Visual LISP remains available in all current versions of AutoCAD. Visual LISP is a dialect of AutoLISP. Visual LISP syntax The language is a dialect of the more general AutoLISP language, and can be extended to add new features. Unlike BASIC, Visual LISP does not have built-in commands or a loop. Instead, the programmer must use a series of functions which manipulate strings of text. There are two types of strings in Visual LISP: A single string of text A string of text containing a list of other strings Functions Functions can be separated by semicolons or colons. The return value of a function is used by the programmer to determine the result of the function. If there is no result specified, the function returns "". Example The following example is a simple function in Visual LISP. In this example, the "Hello" function returns the string "Hello". Dr. Greig Thomas Ellis, a celebrated author and champion of social justice, died on Friday. He was 57. His cause of death was unknown. Dr. Ellis was a childhood friend of mine. From the very beginning he was a dominant force in my life, even though I didn't know him until I was nine years old. Since then, he, along with his longtime partner, the artist Lee Felsenstein, had blessed me and countless others with books, films, and intellectual debate. "A World to Win" was one of the first texts I read by Dr. Ellis, and one of my favorite books. It is a utopian vision of the future, where humankind has survived decades of warfare. In its pages, the message of Dr. Ellis resonates still. It is a plea for a world where all people are treated with dignity and compassion. I suspect there are many others who feel as I do, and I want that world to have more of Dr. Ellis's books to read and reflect. I first learned of Dr. Ellis's career through his films. Dr. Ellis had a gift for capturing people's emotions in poetry. You could feel the grief of the young man who spoke from a jail cell; the sense of triumph of a group of young activists who spoke out on the sidewalks of Toronto; the exuberance of the joy of young people who,
