Clear-cut and compact GUI Following the brief and uneventful installation, the application will launch and display a tree view of your computer's internal and external drives, with checkboxes next to each one. A series of menus allow you to configure Immortal Files to work according to your needs, letting you define the parameters of one or several backup tasks in just a few keystrokes and mouse clicks. Backup your files to locally, externally or on the Cloud with a couple of clicks The first step in working with this utility is to create a backup profile, which begins

---

by defining one or more storage types. These can be local, external (removable drives), SFTP and FTP servers or cloud storage (Google Drive, WebDav, Swift, Rackspace, DreamHost or Box).

Depending on the selected option, you may also need to provide access credentials or other information.

Among other configuration options, you can set a password for your backup, and then begin defining the files or folders that you wish to include in the operation. For this, you can either check the corresponding boxes in the tree view display, or you can set the 'Include' and 'Exclude' filters to target specific items. While it is an advantage

---

that all the settings are memorized between sessions and you can just run a task with a click, one important downside of Immortal Files is that the backup operation can only be executed on demand, as there is no option of scheduling it to run at regular intervals or specific moments.
