The file converter is designed to convert not just text from one type to another, but also images. Supports batch conversion: Ultra Document To Text ActiveX Component is designed to convert files at the same time. Supports external

What's New In Ultra Document To Text ActiveX Component?

Ultra Document To Text ActiveX Component is a component that is integrated into Delphi, C++ Builder, C++ Builder 5, Visual Basic, PHP, ASP, Java and.NET applications. It consists of a set of classes and VCL components that will help advanced users to easily integrate the conversion features of a standard office application into their applications. In order to use it, you only need to: 1) Build your application in the activeX environment of the IDE; 2) Drop Ultra Document To Text ActiveX Component controls on your form; 3) Assign the desired source document; 4) Specify the destination folder where the converted text files will be saved; 5) Click Convert to convert the specified document; 6) Make sure that no other document is opened on your computer; 7) Type a conversion key to start the conversion operation; 8) Check your converted text files in the specified folder. Installation: The Ultra Document To Text ActiveX Component is available for all the following operating systems: Windows 2000, Windows XP, Windows 2003, Windows Vista, Windows 7, Windows 8, Windows 8.1, Windows 10. Office 2000, 2003, 2007, 2010, 2013, 2016, 365 and 2019. Mac OS X 10.4 or later. Technical information: Ultra Document To Text ActiveX Component works with Windows

2000 or later and is compatible with all editions. It is available for all activeX language environments. The component runs on all versions of Windows 2000/XP/2003/Vista/7/8/8.1/10. It consists of a set of pre-compiled VCL controls which can be used in any programming environment. It does not depend on any other libraries or components. There is no need for PDF readers or word processors in order for the conversion to work. It features support for command-line operations. Dragging and dropping is supported, so the end user can choose to make use of the application's traditional menus and buttons (if present) or drag the desired document and drop it on the designated pane in order to specify a source file. In case the PDFs are made of images of text, Ultra Document To Text ActiveX Component won't be able to perform the conversion operation, since it is detected as being a generic image, regardless of its contents. It is advised to use an OCR system in this scenario. If you failed to convert a document and the document is already open, the component will simply move to the next document. If users fail to convert a document, it is recommended that they make sure the document is not already opened by another application. If the document contains graphics or images that will not be converted by the application (e.g. as they are binary files), the conversion will fail. As Ultra Document To Text ActiveX Component is

System Requirements:
