I have been looking over the Internet and the MSDN documentation for several hours now and can't find any kind of answer to this question. Basically, I am trying to read data from a specific sheet in an Excel workbook. The sheet has data in cells E6:E12. Cells E8:E12 are the cells that contain a specific value, x, that I wish to extract. I have tried using the Microsoft.Office.Interop.Excel and Microsoft.Office.Interop.Excel.Worksheet objects and their methods in C#. I have not found a method, however, for accessing a specific sheet. A: try this

```
Microsoft.Office.Interop.Excel.Applicationheet worksheet = (Microsoft.Office.Interop.Excel.Worksheet)myExcelDoc6.get_Worksheet();
Microsoft.Office.Interop.Excel.Range myRange= worksheet.get_Range("E6:E12", System.Type.Missing);
```

When this is not accompanied by a proper evaluation of the strengths and weaknessesencies of the TPA then the user has no s, and should be deleted. Users
