Smart Data Logger is a simple program that helps you to transfer data from devices that provide serial data. It can be any device that sends serial data. With this program you can transfer serial data from manual and automatic scales, from digital temperature and humidity meters, bar-code readers, speedometers, odometers, weights, and others. The program is very easy to use. All you need to do is connect your device to your computer. We'll automatically detect and automatically assign the COM port. The transfer process can be started immediately after the connection to the device is done. The program can also automatically start the transfer with the press of a button. To configure the program, you will need to go to the Tools tab. The first step is to assign a COM port. For this purpose, you need to specify the COM port that the device has. Next, you can set whether the program will automatically start or wait for the start of the transfer. You can set the amount of time the transfer will take. You can set a time range when you start the transfer, so that the program can automatically detect changes to your scale. You can also set a time range when the transfer will stop automatically. If you have any questions, please check out our FAQ and examples for more info. What's New In Simple Data Logger?

Simple Data Logger is a lightweight tool that lets you convert value data from scales, bar-code readers, measuring instruments and others to CSV files directly to your PC. The UI has a simple build, and it's split into several categories that cover all involved operations. In order to successfully operate it, you have to connect your device to a PC. Connect your scale or balance to your PC. The program supports RS232, USB (virtual COM port), Bluetooth SPP and TCP/IP (Ethernet, WLAN) connections. After the connection is established, proceed to set up the app to meet your requirements. The configuration is fairly simple if you follow the tabs and tweak the settings. Simple Data Logger sends the weight values sent by your scale to a CSV file. If required, it adds the date and time to each line. The Plus version can also add line numbers and a custom text and use a timer to request the weight from the scale. To analyze or view the noted values, open the CSV's in Excel or other spreadsheet tools. In conclusion, Simple Data Logger is a handy app that does exactly what it advertises, transferring values from different measurement devices to your system. Simple Data Logger Keys: TimeStamp: Time when the weight was sent by the scale. DataNumber: Number of the data entry. DataValue: Value entered on the scale. List: Date, Time and DataNumber. Tip: The

above-mentioned values are not mandatory to be added to the CSV file.// Copyright (c) 2013 The Chromium Authors.
