API The AutoCAD API is an Application Programming Interface, which is available in all major programming languages supported by AutoCAD. It provides programmatic access to AutoCAD functionality, allowing developers to modify and add features to AutoCAD. The API can be used to create third-party AutoCAD applications. The API is integrated in the AutoLISP programming language and Visual LISP. Another programming language, VBA is integrated in AutoCAD to enable third-party programs to work with AutoCAD. The ObjectARX API enables developers to create their own AutoCAD plugins. Limitations AutoCAD does not support all the software development features in more popular programming languages. The most notable limitation is that AutoCAD lacks a dynamic GUI. This is a drawback for programmers wanting to create graphical user interfaces (GUIs). Another limitation is that AutoCAD does not allow multi-threaded programming. This means that a process run on one thread cannot interact with a process run on another thread. Some developers use AutoCAD's command line interface to control their process. AutoCAD does not support ANSI C or ISO C. AutoCAD is not open-source. Programming support AutoLISP AutoLISP is a dialect of the Lisp programming language with additional AutoCAD features. AutoLISP is integrated in the "Developer" version of AutoCAD. It is cross-platform and supports multi-threading. AutoLISP is supported in C, VB.NET, Delphi, and ObjectARX. Visual LISP Visual LISP is a dialect of the Common Lisp programming language with additional AutoCAD features. Visual LISP is integrated in the "Integrated Development Environment" version of AutoCAD. It is cross-platform and supports multi-threading. Visual LISP is supported in Visual Studio, the Developer version of AutoCAD, C++ and Delphi. Visual Basic for Applications Visual Basic for Applications (VBA) is a Microsoft programming language that allows developers to script AutoCAD from inside their own applications. VBA is integrated in the "Integrated Development Environment" version of AutoCAD and in other office applications. The VBA code needs to be recompiled when run in AutoCAD, but it is a fast and cost-effective solution for automation ca3bfb1094

## What's New in the AutoCAD?

A new option under the Markup tab allows you to send markup to other users or to a website as a link. This enables you to send markup to other users quickly. Now you can bring elements from the Quick Access toolbar directly into the command line. This new feature replaces the AutoCAD Macro Editor. You can use the AutoCAD Attach Macros tool to automatically attach markup to an existing object or run a macro on the attached object (for example, placing a text label). The App Bar is a new menu for easy access to tools and functions. The App Bar can be toggled on or off, and to show specific applications, right-click on the status bar to access a context menu, or use the ribbon. (video: 8:30 min.) The App Bar also features convenient Quick Access toolbars for most drawing tools. For example, you can open the Linework command directly from the Quick Access toolbar, or open the Input tab for better file support. The Crosshair can now display a custom radial indicator for selected commands. You can toggle this indicator on or off using the Tools/Customize/Crosshair/Indicator setting. You can now have the command line display the name of the current view when typing commands. The command line can also display the current parameters for the selected view or object. (video: 2:16 min.) You can now turn on the four arrow tool tips (and set the number of these tool tips per row) when using the Line tool. This feature is found under Tools/Customize/Arrow Tips. New improvements to the Print command: You can specify a title on the Print dialog. You can now copy your settings from one print job to another, and you can also send the settings to a network location. You can print to a Binder, DrawMerge, or a template. You can share a PDF with others using the Share feature, and you can send PDFs as links in email. You can print to a network location, file, or folder, or directly to a physical printer. You can now copy a template to another template with a single click. You can automatically open and use the latest print job. Many other bug fixes and improvements.
