- "Having played through Tarnished to now, I can tell you that Elden Ring Cracked Accounts is a great JRPG in every sense of the word. First, you have to understand that this game isn't trying to be a challenge, nor is it the be all, end all of JRPGS. Elden Ring is what I would consider to be a play by the numbers JRPG. If you've ever played it, you know what I mean. This is a JRPG that will play exactly the way you'd expect it to play, and the only thing that would likely change is the difficulty." • "If you're looking for something simple and easy, there's a very good chance you'll enjoy this game. It's a fun and relaxing experience that's well worth getting caught up on." • "It is hard to complain when you can play an RPG that is good enough to satisfy even the most demanding of gamers. Not only does it bring back the sense of action and fun that made older titles like Chrono Trigger and Final Fantasy 7 such great series, it has a great story, satisfying gameplay, and quality voice acting. The only shortcoming for some may be the low amount of regular and repeatable content." • "Elden Ring is a solid JRPG. It is a solid play, is lots of fun, and will make you laugh. It's not a genre-defining game, but it's a pretty great time for JRPG fans." THE NEW FANTASY ACTION RPG. Gastro-intestinal acute lymphoblastic leukaemia in the adult: a series of 63 cases and review of the literature. Gastro-intestinal (GI) acute lymphoblastic leukaemia (ALL) is an uncommon malignancy in adult population. Although the gastrointestinal tract has been described as the most common extranodal site for ALL, the incidence of GI-ALL among adult ALL patients is rare. A comprehensive search on Medline was performed to identify all previous reports of GI-ALL in adults. We further analysed 63 adult patients with GI-ALL seen at one major medical centre in a 28-year period. GI ALL peaked in the late forties and the fifties and was more frequently reported in men than in women. The majority of patients (57/63) presented with abdominal pain (39/63) or diarrhoea (16/63). At diagnosis, most patients (51/63) had advanced disease, and 24 (38%) had antecedent haematological diseases. Most patients (48/63) had T lymphoblastic features; for those with NK lymphoblastic features the median age at diagnosis was older and there was a trend towards better prognosis. Twenty-six patients (40%) had a prior history of ALL. The overall outcome was poor in adults, with only 22.2% survival. An improved outcome in patients with GI-ALL has been reported in recent years. In our series, the 5-year overall survival (OS) was 18.9% and the clinical features, such as a

presentation with diarrhoea and a prior ALL, were closely related to a better outcome. Larger studies may be needed to further clarify the prognostic factors of GI-ALL. UNPUBLISHED UNITED STATES COURT OF APPEALS
