Show Spoiler... not available for purchase. Official bootcd for Ercom 2000 Product Models.. A certificate that is issued by an authority (such as a government or a notary public) to verify the authenticity, ownership, and/or security of a document or other object or piece of information. □ A certificate that is issued by an authority (such as a government or a notary public) to verify the authenticity, ownership, and/or security of a document or other object or piece of information. A digitally signed message consists of the recipient's name, the sender's name, the encryption key, and any message content. It is created using a private key, which only the sender (or owner) is able to generate, and a corresponding public key, which can be shared with others. The digital signature provides proof that the message has been sent by the owner (or sender), and that the originator has the authorized private key to do so. Anyone can verify the authenticity of the message by using the public key to decrypt the signature. Messages are usually authenticated using digital signatures and verified using encryption keys, making digital signatures a highly useful security method.□ Security: Encryption. Cryptography□ Application. Electronic mail, and, more recently, the World Wide Web□ How it works. A message is encrypted using an encryption key (C) by applying the encryption algorithm E(C). The recipient decrypts the message using an encryption key (K), derived from the original key C using the decryption algorithm D(K). A digital signature, created by encrypting a message using a third encryption key (S), is used to authenticate the originator of the message. The recipient decrypts the signature to find the sender's original encryption key K. Note: A message can contain more than one signature.□ Security: Electronic signatures: Digital certificates are widely e79caf774b
