Download Wavecom W-code Digital Data Software Decoder For 17IQ: Xamarin Android - Layouts and size of buttons I am developing an android app using Xamarin. The problem is that the buttons in my layouts are too big, and I want to know how to reduce the size to make it

look more compact. Is there a way to force a smaller size for a button? I have tried setting `android:layout_width` and `android:layout_height` to `0dp` but this didn't do anything. I have also tried setting `android:layout_width` and `android:layout_height` to `wrap_content` and didn't work either. Any help will be much appreciated, thanks! A: As suggested by @George in the comments, the size of buttons can be adjusted with the following property: `android:minWidth="20dp"` If you want to set the width for your buttons you should use the following property: `android:layout_width="wrap_content"` If

you want a button to have a minimum width, just use:

`android:minWidth="20dp"`

`android:layout_width="wrap_content"` As for the height, there are two ways to do this. If you want it to look the same on all sizes you need to use the following: `android:layout_height="wrap_content"` If you want the height to scale with the size of your screen, you have to use a `layout_height` that looks like this: `android:layout_height="@dimen/min_button_height"` This way, the button will look the same on smaller screens and will be resized on larger ones. , the results of the meta-analysis were still significant,

and the inclusion of the three subgroup analyses did not affect the results. Some studies have reported that the serum levels of IL-10 and IL-6 can change after TPLO procedures \[@ref35]-[@ref38]\], while others have shown no significant differences \[@ref39],[@ref40]\]. Wang *et al.* \[@ref19]\] revealed that IL-6 and IL-10 levels decrease significantly 7 days after TPLO. In contrast, Moshkovich *et al.* \[@ref41]\] concluded that IL-6 and IL-10 decrease by day
