In agreement with [25] we also found that vegetarian diet had no effect on BMI and blood pressure ([Table 2](#t2){ref-type="table"}). A study in Nurses Health Study, which is based on a representative sample of more than 130,000 women in the US, showed that having a vegetarian diet (compared to a non-vegetarian diet) was associated with higher risk of type 2 diabetes ([26]). In addition, in our study the number of participants who were vegetarian for more than 20 years was very small, and we did not find any differences in lifestyle habits between these subgroups. Due to complexity of the diet in Iranian nutrition, there are limited studies that have focused on dietary intakes in Iranian families. In a study based on 24 h

children. My final goal is to write a console application which will distribute medical information to our patients. It will interface with the Patient Management System which is already written and working. It is a medical records system that is not yet patient specific, so I would need to write a lot of code. I only have one area in which I am concerned, my
