It found that if global warming continues to rise, it could cost \$30 trillion by 2100. The report - which you can read in full here - looked at the economic losses of extreme events, including hurricanes and floods, droughts, wildfires and heatwaves. It said that without significant action, these events would increase in severity and frequency. To put that in perspective, \$30 trillion is equivalent to the entire economic output of the global economy over the period. According to the report, there is a \$50 trillion loss in potential gross domestic product (GDP) annually. The report found that
