I checked my IP at an online website and it says it is 91.207.32.188. How can I fix this issue? I've tried so many ways on google that I don't know what to do. A:

First, set up your router to forward port 80 to your computer. If the router is set to NAT it will appear as if your computer is on another network. That's why you can't access it from the outside. So, your router will forward port 80 to your computer, which will forward the request to your IP address, which is your actual IP address. This means that, when you try to access your computer, it will go to your router and request to your external IP, which is the IP address of your computer. If you see an error message from your router (like port 80 is already in use) that means your computer is already using port 80. If it's not, your router is forwarding the request to your computer and you should be able to reach your computer with the external IP. If you can't, there's something blocking the request. You can check

if your router is set to NAT by checking the IP address of your router. If you're on the same network, you're using a router that's NATing requests from the Internet, and you're not getting an error message. If you are on a different network, you're not using a router and you're not getting an error message. That means your router is forwarding requests from the Internet to your IP address. Pages Tuesday, March 19, 2011 The purpose of this post is not to give advice on how to handle situations that may occur at work, but rather to answer a question about a situation that I encountered when I was just getting started in my career. I was given a phone call from a manager who told me that I was being removed from my current position. The phone call came unexpectedly and the manager didn't tell me why he was doing it. I was quite upset about the news. I guess I was too emotional. Later, I was told that the manager told me that he wanted to know why I'm working so hard if I don't plan to stay in the company. I

was confused. I didn't understand what he was trying to say. He said I was a star employee and I needed to put my best foot forward if I wanted to stay with the company
