In May 2000, Autodesk released a 2D drafting component, AutoCAD 2000, as a follow-up to its original AutoCAD product. AutoCAD 2000 followed the traditional "CAD/CAM/CAE" acronym to market the application, since the product did not originally contain a true CAD product. AutoCAD 2000 was the first to feature features such as network and web sharing, and the first to support.DWG and.DWF files. The 2D drafting component was spun off to become Bizzabo Design in 2002, and was later acquired by Autodesk in 2015. Autodesk later released an integrated 3D CAD component in 2015. AutoCAD has been used in an estimated 45% of all CAD projects.[1] AutoCAD's primary competitor is the equally named but different competitor product Autodesk AutoCAD LT. In the mid-2000s, Autodesk launched the competitor product "AutoCAD Architect" as part of its Architectural Design Series of products, a product suite targeting architects, interior designers and other architects and engineers. AutoCAD 2017 and AutoCAD LT 2017 are the current versions of AutoCAD and AutoCAD LT. History The AutoCAD R14 release, officially titled AutoCAD Reference Edition 14, was released in June 2003. This new AutoCAD release consisted of two components: AutoCAD R14, which contains the AutoCAD Graphical User Interface (GUI) and tools, and AutoCAD R14 DWS, which contains the 2D Drafting and Data Services (DWS) components.[2] A "Reference Edition" was the minimum version of the software to make it available for the first time to independent software vendors (ISVs) for inclusion in products for sale to the general public. In addition to AutoCAD and AutoCAD LT, the DWS component supports the ANSYS Design Modeler for 2D/3D modeling, data management and simulation, and DesignSpark for 2D/3D solid modeling and simulation. AutoCAD R14 introduced 64-bit editions. This was the first release of AutoCAD to contain a 64-bit version of the application. AutoCAD 2016 was released in September 2014. AutoCAD 2016 introduced the Windows 10 interface. AutoCAD 2017 was released in June 2016. AutoCAD 2017 introduced new features such as the 3D Bridge feature, the

Architectural Autodesk Vault is a cloud-based application for gathering and sharing plans, drawings, and other architectural documents. Vault was released in 2006. As a single software product, it replaces and unifies several CAD-based architectural applications. It offers custom tools and functionality to Blender for using AutoCAD and AutoCAD LT models as external geometry. Autodesk Poseidon For Architects: provides support for both architectural visualization and architectural design. Awards In 2012, Autodesk re-launched the category of its prestigious annual technical excellence awards, the Autodesk Technology Awards. The Autodesk Technology Awards recognise outstanding software, hardware, user experience, cloud and design

solutions that improve the way people work. The 2012 awards were based on nominations received from across the Autodesk user community, and the winners were revealed at a ceremony held at the Autodesk offices on 17 December 2012. Winners included Windows 8, The Visualizer (2008), Mayestream (2011), Revit (2011), Autodesk Unite (2012), and Teamcenter (2012). How to convert the UTF-16LE encoding to UTF-8? I have the encoded string 'Çağdaş - Büyükaşağı' which is "Cagdad - Bayikaghi" in UTF-16LE encoding. I want to convert it to UTF-8 encoding so I want to remove the character " ". And I want to convert the string to "Cagdad - Bayikaghi". I tried to use mb_convert_encoding but it gives me the result "cagdad - bayikaghi" which is the English translation of the original string. So how can I convert UTF-16LE encoding to UTF-8? Thanks! A: From the mbstring docs: mb_convert_encoding is an alias for mb_convert_encoding_pageset as of PHP 5.3.6. So your example should work, and do what you want. Q: Cannot access web app (php) from another computer on the same network? I have a website which I've just installed on a new server, and I've been trying to access it from my old computer on the same network. I can access other websites just fine. However, when I go to the address for my website, I get "Network Error". I'm assuming I'm missing something really simple. I've tried accessing the php files through the server's url instead of the web address, and I get a 404 error. I've tried just accessing the php files directly through the computer that runs the site and I get the same error. What am I missing? Edit: Even though the web app was installed on the server, it was installed through a git repository, so I haven't been able to see the actual files. I have no idea if this could be an issue or not. A: You should be able to access a website hosted on

Join the conversation!The present invention relates to the field of integrated circuits and, more particularly, to the detection of misalignment of complementary metal oxide semiconductor (CMOS) image sensors in an integrated circuit. An image sensor senses electromagnetic energy (light) and generates an electrical signal representative of the sensed light. This electrical signal is called an image signal. The image signal is used by an image processing system to generate an image that may be displayed on a display device such as a cathode ray tube (CRT) or liquid crystal display (LCD). An image sensor typically
